Battery disposal & recycling

The following are campus-wide procedures on common battery disposal and recycling:

- **Alkaline batteries** (AAA, AA, A, C, D and 9 volt) should be discarded in the regular trash.

- **Button batteries** should be placed side by side between two layers of tape and sent to Jill Fermanich Business & Finance via campus mail. These batteries look like coins and are found in watches, calculators, cameras and other small equipment. They need to be recycled through the state's hazardous waste disposal contractor.

- The following **rechargeable batteries** should be placed in plastic bags and put in a Call2Recycle bin:
  - Nickel cadmium (NiCD)
  - Nickel metal hydride (NiMH)
  - Lithium ion (L-ion)
  - Small sealed lead (Pb) batteries

**Call2Recycle bins** are located in these areas:

- Cofrin Library (3rd floor)
- Operations office (IS 1204)
- HVAC shop (IS 1067)
- Grounds (PP102)
- Environmental Health office (CL 823)

For disposal of other batteries or for disposal of any material for which you have questions, please call or email Jill Fermanich at 2273 or fermanij@uwgb.edu
