

## Green Tour

### MARY ANN COFRIN HALL

- The building includes a solar wall, photovoltaic windows, and standing seam metal roof with a thin photovoltaic system to help increase heat exchange throughout the building.
- Other aspects of the sustainable design include daylighting, skylights, and recycled and sustainable materials such as cork, bamboo, and rubber tires.
- The Lenfesty Courtyard holds a rainwater catchment and irrigation system to support plants and includes multiple gardens with a variety of native plants.
