Environmental Science

Environmental Science continues to be a pivotal part of UW-Green Bay’s interdisciplinary, problem-focused curriculum and is meeting a complex set of demands to support its own courses as well as those of associated disciplines. Although it contains a large number of faculty from a wide variety of disciplines, Environmental Science maintains a high degree of collegiality. The program continues to be stretched by limited faculty resources, which limits its ability to offer courses frequently enough, or in enough variety, to completely satisfy student needs. Indeed, scheduling problems rank high on the list of complaints of graduating seniors. The program has engaged in assessment activities but, like most units, is still struggling to devise adequate assessment vehicles.
